## Lead Convoy • EOD • First Response

Proven combat survivability is the key to sending personnel out with a go anywhere, do anything and get home to tell about it attitude. The advanced ballistic and blast-protected MRAP Cat I Cougar boasts an outstanding occupant survival rate. The Cougar 4x4, which can transport up to six passengers plus equipment, has been a workhorse for the U.S. Marine Corps combat engineers in Iraq since 2004. The Cougar is the paragon of troop transports in Iraq and Afghanistan, where it has withstood literally thousands of IED/landmine attacks. As for the survivability of the Cougar itself, not only is the vehicle built to drive into danger, its reparability typically allows it to return to service within a matter of hours. The Cougar's reliability has gained it global notoriety and is being sold to foreign allies in Canada, Iraq and the UK.
